PROFESSIONAL SUMMARY

Final-year ICT student specialising in Software Engineering, with hands-on experience building backend, full-stack and AI-enabled applications using Python, TypeScript, FastAPI and Node.js. Experienced in speech recognition, AI integration and multidisciplinary international projects. Seeking a final-year Software Engineering internship beginning February 2027, with interest in long-term growth after graduation.

EXPERIENCE

Software Engineering Intern

Sep 2025 – Jan 2026

JRCZ Data Science Lab

AI-powered VR training platform used by nursing students in the Netherlands.

- Designed and benchmarked a Dockerised Python speech-to-text service using FastAPI, WebSockets, WhisperLive and faster-whisper, reducing backend transcription latency by approximately 65%, from 4.0 seconds to 1.2–1.5 seconds, and demonstrating near-real-time Dutch transcription.
- Evaluated 5 machine learning-based speech-recognition solutions and validated the selected prototype through 10 automated tests and user sessions with 3 nursing students, helping the team make evidence-based architecture decisions.
- Upgraded and merged the AI feedback generator with 5 communication indicators, analysis based on an established nursing assessment framework, and actionable recommendations, giving students and lecturers clearer post-simulation insights.

EDUCATION

HZ University of Applied Sciences

2023 – Expected July 2027

BSc Information and Communication Technology — Software Engineering

Chung-Ang University, Seoul, South Korea

Feb 2026 – Jun 2026

Business & Data Science Minor — International Exchange Semester

Coursework included Data Science for E-Business, Management Information Systems, Marketing and Organisational Behaviour.

PROJECTS

SolaiMenu — AI-Powered SaaS Platform

Full-Stack Developer

Oct 2025 – Present

- Built a full-stack, multilingual QR-menu platform using Next.js, TypeScript, Tailwind CSS, Supabase and Vercel, enabling restaurants to create, update and publish menus in 10 languages from one dashboard.
- Integrated the OpenAI API for automated translations, allergen information and food-and-drink recommendations, transforming menu data into clearer guest-facing content and helping international diners make informed choices.

JUNKER — Eco-Conscious Exchange Platform

Full-Stack Developer

Nov 2024 – Jan 2025

- Collaborated in a 6-person development team to build an eco-conscious platform where users could give unwanted items a second life and connect through interest-based communities.
- Developed frontend and backend functionality using SvelteKit, TypeScript, Tailwind CSS, Node.js and Express.js, creating a responsive experience for listing, discovering and exchanging items.
- The project reached the university's Dragons' Den final and placed 3rd, validating its sustainability concept and business potential.

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, PHP, SQL

Frontend: React, Next.js, SvelteKit, HTML5, CSS3, Tailwind CSS

Backend: FastAPI, Node.js, Express.js, Laravel, REST APIs, WebSockets

Databases & Platforms: Supabase, PostgreSQL, MongoDB, MySQL, SQLite

AI & Machine Learning: Speech Recognition, Whisper, faster-whisper, NLP, LLM Integration, OpenAI API

DevOps & Tools: Docker, Docker Compose, Vercel, Linux, Git, GitHub, Jira, Postman

Testing & Workflow: Unit Testing, Integration Testing, Python unittest, Agile/Scrum

Languages: English (Fluent), Russian (Fluent), Hebrew (Fluent), Bulgarian (Fluent), Dutch (A1 – Basic)
